ARTIFICIAL INTELLIGENCE AND ETHICS

The introduction of artificial intelligence was one of a major turning point in today's digital world. As the world is modernising day by day, we are introduced to a number of new technologies which enhances the quality of our lives in all aspects. Artificial intelligence provides us a number of advantages as well as disadvantages. We are subjected to a number of different challenges in every field, here comes the necessity of an agent which can ~~make~~ help us to face these challenges efficiently. ~~As ev~~ As everything has two sides like that of a coin, these newly introduced technology has its own positive and negative side. But the number of advantages and efficiency they provide outweighs the danger, that these technologies can cause. As the world is modernising, the human minds are also modernising getting introduced to a number of ideas. In this busy world, AI has become an inevitable part of our life.

Artificial Intelligence — A boon or curse?

As everything has its own negative and positive sides, the same goes with artificial intelligence. Artificial intelligence is making our lives easier but at the same time is dangerous in for the general populace in many ways. We are coming across a number of news exposing the hazardous nature of the new AI technologies. But the positive impact it has in enhancing the busy life of people cannot be ignored.

The competition in every fields have increased. Artificial intelligence provides us with appropriate informateous, materials and a lot more. Artificial Intelligence is really a helping hands for students which enables them to various study materials helpful for their educational purposes. Also in many scientific researches and industrial works the role that this technologies can do is immense.

Discussing about how it is helpful for

Page No:

students, first we can state is that, right information is given to the students in a few fraction of seconds. This way it is helping to save time, which is really a plus point ~~as~~ in busy lives of todays population. Another thing is that it makes our works to complete perfectly in a small period efficiently. Thus our workload is minimized. In many educational institutions, students are been given awareness about this newly introduced AI technology.

However we cannot ignore the hazardous nature of this newly introduced AI technologies. The crimes related directly or indirectly to this AI technologies are increasing at an alarming rate. We have to be aware of this issues only then we can save ourselves from falling into the dark holes of this mind blowing AI technologies. Along with ~~how A~~ the introduction of these type of technologies ~~are~~ we introduc have to give caution to the public about the disasters it can cause among the population

Positive impacts of AI on public

(i) <u>Provides easy access to information</u>: Even though the internet is providing us with a number of websites, apps and so on, the efficiency of these AI technologies is dominating the other spheres of the internet world. First and foremost, is that it provides children with right information which will help them to shine in their academics.

(ii) <u>Helps to save time</u>: The work of artificial intelligence is is more efficient than a number of other technologies. By giving the right instructions, they will complete any type of work in a very short time thereby helping people to save time in this busy world.

(iii) <u>Quality output</u>: We can just guess how one can complete a work especially in those who works day to night infront of computers and laptops. Even though the work is done on time it will be full of errors. This is not makes the necessity of a technology which can do the computer programming

(Note: This page will be scanned to publish the article in schoolwiki. So, Write neatly. Don't fold paper. Don't write overleaf).

Page No:

works fastly and without any errors. For example chatgpt is a great AI tool which can be used by any age group. Informations around the world is exposed to them by just making some right movement with their fingertips.

(iv) <u>Provides us ~~with~~ new ideas</u>: Even though a number of technologies are there on market, we are introduced to new challenges everyday. Here comes the necessity of AI technology that it provide us with new informative ideas from which we can invent other more efficient technologies. Ideas are the fuel for a better living conditions in the future. New ideas introduces new technologies which can cope up with new challenges.

(v) <u>Leading us to a number of opportunities and unlock the new doors of knowledge</u>: Each person has his or her own interests. If they are provided with right tools it can help them to flourish in their fields and can go a lot more forward by conquering heights. Thereby Artificial Intelligence helps one to realise

Page No:

their potentials and by providing the appropriate information regarding their career opportunities. As there is a proverb which says "Interest is the mother of learning", one can only shine when he or she is interested in the field they are working. Then they can find new inventions and contribute a lot to the society making the lives of people better than before.

Negative Impacts of AI on public people

(i). <u>Decline in the employment opportunities for people</u>: We cannot go further without discussing the most important negative impact that AI causes-, that is unemployment. As most of the work is done by the newly introduced Artificially ~~introduced~~ Intelligency technologies, the role of man is decreased which results in unemployment. Literally in every field we can see that these technologies are dominating the human workforce by providing efficient work. Also the cost of work done by man is a lot less

(Note: This page will be scanned to publish the article in schoolwiki.   So, Write neatly.   Don't fold paper. Don't write overleaf).

Page No:

when it is done by the new technologies. This is also one of the main reason why most people are seeking the service of these technologies than from w the people itself.

(ii) <u>Increasing cyber crimes</u> : When anything is used by wrong persons it ~~can~~ will definitely cause an adverse effect on people. Hacker and those who are well-known for cyber crimes comes to know about the functioning of these technologies, they will definitely try to harm the people and create a sense of fear and terror among the people. There are a number of necoses about cyber crimes. Everyone have to be aware of these type of dangers to be safe from falling in traps

(iii) <u>Leakage of personal informations</u> : Personal datas are ~~theft~~ by hackers who ~~can~~ knows about the ~~correct functionin~~ how these technologies work. Bank account details are accessed by the wrong people which is a major issue faced by the population.

People tends to commit suicide ~~and~~ or go in a depressed phase because of such type of danger that these technologies will cause. All the thing that we can do to overcome these type of danger is making everyone aware of how these can cause us danger. As we all know prevention is better than cure, make sure that whenever you are using these type of technologies be cautious about giving your personal datas and much more.

Is Artificial Intelligence dominating us?

A common question aroused by people after the introduction of such multi efficient technology is that if it will be threat to mankind. It is a concerning issue nowadays in every part of the world. There was a widespread news about the AI robot Sophy, which is discussed worldwide. It is thinking and reacting the same like how man tends to think and react. In older days, we know that robots were just a piece of metal which

(**Note:** **This page** will be scanned to publish the article in **schoolwiki**. So, Write neatly. Don't fold paper. Don't write overleaf).

Page No:

when given instructions do the work. It doesnot have any type of thinking capacity or feelings. But as our knowledge is increasing, we are able to invent a robot which can think and sense things much more efficient than humans. Here comes the concern that if these technologies ~~are~~ will dominate all spheres where humans lived a harmonial life.

Thinking of world where robots dominate all the sphere which were once run by humans is concerning the public. Such a world is not a distant. If do not have a check upon ~~the~~ the over domination of such technologies, the future of the upcoming generation is dark. By the number of advantages, people are relying completely over such technologies and is gradually losing all the thinking capacity while at the same time these robots are working as well as thinking a number of times better and efficient than human minds can do.

Future of these Technologies.

These newly introduced AI technologies will surely gets upgraded much more than it is nowadays. Even though we are imagining these are the maximum output that these man-made technologies can do, we are thinking wrong. We comes to know there are more to be invented and to be known as new innovations are introduced. For instance, we never knew we will need of these type of AI technologies before they are invented. Look at us now, we are mostly or completely relying on these technologies each and everyday.

There will be more upgraded or similar versions with more efficiency in the future. Researchers are done to study the impact of artificial intelligence among people. According to stastics, about 82% of ~~people~~ students are relying on these informations given by these AI websites which inturn declining the thinking power of students. We know a time, where students try to catch informations about a particular thing by

(Note: This page will be scanned to publish the article in schoolwiki. So, Write neatly. Don't fold paper. Don't write overleaf)

Page No :

reading a number of informations from a number of books. There by the knowledge they got is immense. Which is not even an option for todays childrens, which is a concerning situation.

CONCLUSION

In closing, taking ~~drawing~~ all the ~~topics~~ things discussed under consideration we can say that we cannot ignore the importance of 8 AI technologies in our daily lives. even though they have a number of negative aspects as well. Furthermore, we are subjected to new challenges such introductions of technologies is very necessary. New world with more opportunities is waiting for us. Rather than focussing on the positive aspects it can give we have to be aware about the dangers it can cause. We cannot completely say that such AI like technologies is hazardous, it is very necessary for the a modern world and the modern people. We can make a better, quality lives if we make use of AI technologies in the right way and making our digital world a better place for everyone.
