

Subject : "AI and You"

Dawn to Dusk : AI, my friend and all

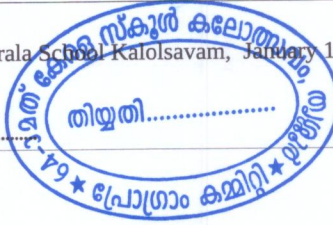

Introduction

Every day, I wake up hearing the alarm set by my dad on Alexa. This alarm is an haunting memory to me as it disrupts my sleep with its loud, shackling voice. If I wake up, I will take myself to the neverending screen time. When I open my favourite Netflix for watching the rest of the series, suddenly, a pop-up appears suggesting me what I may like. Next would be my concern of the incomplete homework. Then I will trust ^{myself} upon the encyclopedia of my life - ChatGPT. It will provide me with a festidious work, in less time. This never ends. After saying goodnight to my Alexa, I will go to bed thinking about my next day.

..... This is... what AI is ~~used~~ to me.....
From.. Alexa and Siri.. to.. self driving cars..
AI.. has become the part.. and.. parcel of.....
my.. life.... To me, .. AI.. is.. my.. bosom friend..
trustworthy companion, guiding teacher.. Yes,
AI.. is.. something.. very.. special.. to me.......

..... AI or Artificial Intelligence
is the ability of.. computational systems...
to perform human tasks. With its initial
seeds in 1956, AI was something 'greek
and latin' to me a few years ago...
But now, it has become a doubt for
me... whether... AI acts as my master.....
At the hour of unprecedented technological
advancement, it is... crucial to take a
moment to reflect upon the both sides...
of AI. This... is... where the core of...
this... pertinent... topic... 'AI and You' lies.

AI - when becomes my soul

In the new system of education, there evolves a new concept of self study. It is quite accepted in many developed countries. As this era is highly competitive with globalisation, each and every student needs to cope up with the ^{so called} bitter face of this. But when AI is here, no need to fear. As a student, AI gives me valuable suggestions, advices and everything. Last month, during exams, AI was there for guiding me by pointing out the cardinal concepts, including previous year questions and exam tips. Whether it be 2:00 pm or 2:30 am, AI is on my finger tip, ready to work for me. As a student, it was quite extraordinary for me. For me, for my friends, AI is the quintessential of a passionate.

teacher.

I am highly interested to make and direct dramas, skits, short films etc. But there are boundaries restricting me. But I just need a single second to surpass all these boundaries. Just a single tap for opening my AI platform. There, any one could enjoy the boundless pleasure of art. Art is of course humane possession. But AI within two or three seconds gives me interesting and perspicacious admirable videos, short films. It gives me a universal venue for the blossoming of my artistic talents. Really, it was quite astonishing to see that the movie 'Love You' was ^{completely} made using AI. I become a fan of it. The video AI made using my shortstory really went with our GenZ mindset.

A lot of career options are ubiquitous in this era. But my dearest friend AI found the right path for me when I was nonplussed with all these. It just made it possible by valuating my hobbies, actions and potential. Now AI is my personalized doubtclearing friend.

It might be crazy to communicate with AI. But ~~one~~ in my difficult situations, it is not something new for me to share my concerns to my loyal friend - AI. When AI is there to lend its imaginary ears, there is no doubt to do like that.

Youth are the torchbearers of any change. I am also a part of the vibrant, vigilant and enthusiastic youth who anticipates to be a part of the democratic process. But recently, AI-made election posters

captured my heart. To be frank, I was really attracted to the complicated and meritorious Parliamentary Democracy system of India. When I was also a part of school leader elections, it was effortless for me to carry out my IT works without any exorbitant procedure. Less time, less expense, more creativity and efficiency, increased efficiency and availability - everything under one umbrella. AI is of course a gamechanger.

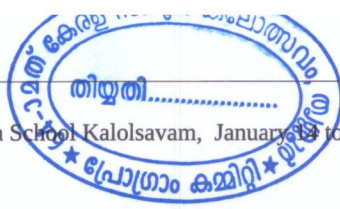

As a keralite, as a student, as a future promisee of this country, it is very woeful for me to see the statistics of 1.34 lakh road accidents. Even though my family members used to disobey traffic rules, ^{then} AI cameras came to the scenario. Even though I forget to wear helmet, AI camera won't forget

My wish of not being captured in the camera is not anything before the opened eyes of AI cameras. Now I could really understand the proverb saying:

"Technology helps human beings advance".

And prominently, AI is my life setter. It is my personalized health tutor, alarm, timetable and all. It gives me a tedious and overwhelming 'to do list' to make my day something extraordinary. As stated earlier, Alexa is like my mom who calls thousand times to wake me up. Now, my mother is quite happy relieved from this tension. It is like my naughty sibling who warns me up with her never ending jokes. It is like my grandmother who

embraces me with her fables and folktales
XI is my all in all.

Recently, I was
in a fix when my father told me to
sing a song about my uncle in a
family function.

"When XI is here, why fear?"

An one minute procedure of typing the
prompt, what I got is a admirable
and aesthetically pleasing. Really I won
everyone's appreciation. Even, my biggest
dream to go to Taj Mahal was
easily made by Gemini's Nano Banana
feature which was something causing
delight to me.

Is AI ruining me?

AI is my everything :
From alarm to personalized tutor, health
checker to friend. But when the
dark sides of AI gets unveiled to
now a days, It has become my gravest
concern whether AI is extra to me.
AI is the quintessential of a
dual edged sword.

For me, AI helps
my analyse my setbacks, provide me
extra practice and guides me through
beautiful and intricating video lessons.
But it still is not a substitute for
my passionate teachers who drives learning
with passion and love. In my
opinion, AI should act as assistants
of our teachers. It is like that now.
But I fear whether we human beings
assert AI over our teachers who are

(Note: This page will be scanned to publish the article in schoolwiki. So, Write neatly. Don't fold paper. Don't write overleaf).

ready to dedicate anything for us. So the problem lies in the thoughts of the users.

AI is said to displace millions of jobs in next decades. But there still remains some sectors which need human values. For me, human values need human feelings. Even if my AI friend hears my concerns, it lacks emotional intelligence. It can't understand my feelings. It can respond only with algorithms fed in it.

AI can make administration dynamic. But when I can handle AI easily, many could make AI their toy. This may reduce the security of our nation itself. As the ~~reper~~ representative of an enticing youth, I can't compromise my country's security.

... Recently, when I used an AI platform for assessing my ^{health} ~~health~~, I could only enter some portion of the needed data. But due to curiosity, I searched for the result. To my surprise, I gave me result:

"You are perfectly healthy".

How could AI assess my health without my age, height or weight?

Even if I prepare beautiful and unique poems using AI, it is a worst teacher for me, in case of regional languages. The usages, spelling words all are orderless and meaningless some times. The poem about "Mother" which I prepared using AI contained 5 grammatical mistakes.

..... The most shocking demerit of AI, I
found myself was that It reduced
my skills and my creativity. But this happened
when I completely relied on it.
When my Alexa's charge went down, I
couldn't wake up at the right time.
My mother was only there to help me.
When I do my Maths work with AI
it is ~~the~~ my arithmetic skills that ^{gets} killed.
It is my concentration that ^{gets} ~~is~~ reduced.

..... Ultimately, AI can
regulate us. But if it goes to skies,
AI will be our masters. I love freedom
And who don't? So it is our
mindset that should change. I believe
that we shouldn't trust ourselves
in the hands of AI instead take it
in our hands. Collaboration between
government and people will bear terrible
fruits.

AI, indispensable ultimatum of technology is shaping me. My lifestyle, culture thoughts everything is shaped and also changed. But in some crucial conditions "AI and You" won't be there. "You" will be there and ~~no~~ AI ~~without~~ be there to help you. My evaluation, is simple. AI is my greatest ally. When I manage it with vested interest or lack of knowledge, AI will be my greatest enemy.

"Future isn't predetermined"

It is my choice that matters, your choice that sound. It is our sound that shouts: Being a member of a society ^{highly} sophisticated. AI is there in my life like my family member. It is a well known fact for me.

(Note: This page will be scanned to publish the article in schoolwiki. So, Write neatly. Don't fold paper. Don't write overleaf).

I believe AI won't replace us, you
or me. It will only replace the
ones who misuse it. It can't nurse
me with empathy, it can't scold me
with love, it can't love me
demandless.

I agree to what Stephen Hawking said
"AI is one of the greatest advancements
we've ever made. And if in wrong
hands, it could be ^{our} my last." AI is
my friend and foe. It is my intent that
shapes it. Dawn to dusk, AI is
with me helping me, learning me and
destroying me.
