

ARTIFICIAL INTELLIGENCE AND ETHICS

The human race have reached a point where Artificial Intelligence or A.I is slowly sweeping into our every day life. Artificial Intelligence should be considered as 'One of the Wonders' in the Technological World. A.I is nothing but a perfect mixture of goodness and corruption. Or in my words, it is a 'yin-yang'.

The introduction of A.I has indeed been a great help to everyone, including students, schools, and even job professionals. Artificial Intelligence is ~~not~~ undoubtedly a great helping factor to the society. Taking a quick peek into life before and after Artificial Intelligence will prove it. Speaking of the positive aspects of Artificial Intelligence it indeed is a great help to children all

around the globe. Problem solving is much easier now as Artificial Intelligence is just one-touch away from us. It is also helpful in the process of revision and learning. The children are often using Artificial Intelligence also for their assignment completions, which should be considered as a malpractice.

... Ethics is a closely associated term with A.I. People sometimes has the tendency to forget that most of the human inventions are solely made for the purpose of helping these people. Every human activity is considered good until these same humans starts doing it with a bad intention. That's where people start loosing their so-called ethics. Ethics is a human attribute that builds up the person that they are. Even though Artificial Intelligence is solely made

for the purpose of keeping up the ethics, ...  
what we today is see today is people being  
head-over-heels for it and slowly loosing ...  
their ethics - which in turn is their character  
itself. ....

... No two people are alike - the colour, the  
race, the ideologies and also the ethics. There  
are many aspects in our life, where Artificial  
Intelligence can literally be a 'life saver'. It is  
still an unanswered question that why would  
people do something that's against their ...  
ethics and ideologies. Cyber crimes and ...  
thefts are now at an all-time-highs due  
to the advancement of Artificial ...  
Intelligence. ....

... Artificial Intelligence is slowly turning  
into a burden than a blessing. 'We reap ...

what we saw'—I hope that this . . . . .  
statement applies to everyone that is . . . . .  
contributing to the change from 'blessing to  
burden'. We should have believed it when  
Steve Jobs said "A.I is scary". The advancement  
of A.I was to help people and to help them  
in keeping up their ethics. This so called . . . . .  
ethics should be questioned. . . . .

Some commonly seen areas of losing . . . . .  
this ethics are—committing cyber crimes . . . . .  
and theft, stealing other person's identity,  
and often accusing people. These cyber . . . . .  
crimes varies from morphing of pictures and  
videos to posting them and also pretending  
to be someone else by stealing their identity.  
Morphing and editing should be taken as a  
more serious topic and one accused of doing  
it should be charged with great consequences.

It is also the exact opposite of respecting peoples privacy. Not even a single person would love watching their pictures being turned into something that would be quite unrecognisable. And also doing it is just a command away. One's identity should also be respected just like their privacy. Pretending to be someone else online has its own consequences. Even if its with their permission it should still be considered as a crime and should be charged against law.

... One's actions are something that only and completely depend on that person. So at the end of the day, all the consequences are just the results of our actions. And using Artificial Intelligence for these consequences should be reconsidered. One should always try to keep up their positive ethics. Once we start

looking at 'Artificial Intelligence' as a blessing, we will realise that it indeed is a blessing and a life saver at many points of our life.

Artificial Intelligence as I said is really one of the biggest achievement in the Technological World. And the developers should also be proud of themselves for contributing so much help to the human race. Every question and its solutions, every possible human thoughts, lots and lots of knowledge, crimes and theft, stealing, morphing and so on, are just a touch away.

The increased popularity of A.I sites such as ChatGPT has helped in spreading the word about A.I. Even ChatGPT has already helped millions and millions of students and

others with their questions and doubts. AI is more of a blessing to many people than a burden. It do feels like life has been much more easier and more convenient with the advancement of these technologies.

Artificial Intelligence has also been a great help to many people including artists and creators. AI technology options like 'generative fill' helps in expanding pictures, restoring old pictures and even changing it according to our commands. AI can also generate stories, poems, essays or even homeworks according to our wish and commands.

Artificial Intelligence can be scary, if people use it with bad intentions other than thinking of it as a helping platform. Why should someone twist it and change it to a burden when it is actually made to help us instead? This question is

of great social importance now. Now. Only someone who is willing to work against their ethics will do it. Value your own ethics. That will be one of the greatest gift that we can gift ourselves.

At the end of the day, what we do - solely depends on us. We can either do good and be a better person in this society or do bad and be a menace to the society. Everyone should consider the first option and should work for it. To do good, is to keep up our ethics. And this reminds me of the quote "There is no such thing as bad people, we are all people who sometimes do bad things" by Lolleen Hoover in her book 'It Ends With Us'. So in conclusion to that, everyone should consider doing good and being good. And technologies like 'Artificial Intelligence' should be used with this same purpose of doing good and being good.

Artificial Intelligence and Ethics are quite similar to the two sides of a coin. They are both closely associated and both closely depending on each other. One should be aware of the good and bad aspects of technologies and how ~~techn~~ technology plays a crucial role in our everyday life. Once again- "We reap, what we sow".
