NATURE

*In the heart of forests deep and wild
 Where ancient trees
 stand tall and proud
 Birds sing melodies
 sweet and mild
 In nature's chorus
 clear and loud
 The rivers rush with
 ceaseless flow
 Carving paths through rugged land
 Mountains high with peaks of snow
 Guardians of a timeless stand
 In fields of green, where flowers bloom
 Their colour painting earth's tale
 Creatures roam beneath the moon
 In harmony, they dance and wail
 Oh, nature's wonder, pure and true
 A masterpiece of boundless art
 With every dawn, a world anew
 In nature's embrace, we find our
 part*

Globalwarming climate change

climate change has been a cycle through geological time (meredith 2012) however in recent years rises in carbon dioxide rich human activities (hauncel 2013) such as deforestation and burning of fossil fuels have dramatically . the level of greenhouse gases such as carbon dioxide in the environment (department of environment 2014) and consequently the rate of global warming there has been extensive evidence and research compiled to show that the recent warming is unprecedented and is not attributable to natural mechanisms alone and that the changing climate is more greatly influenced by anthropogenic green house gases.

climate changes by natural and man influenced means
Climate change refers to the long term change
in our climate and weather which can
range from data over decades to millions of years
(defining climate change 2011) the globe has been
warming at a higher rate in recent years due to human
activity (nuccitell,2014) in contrast to climate
change global warming refers to the recent increase in
global temperature
(merriam-webster incorporated,2014)
A mean that also affects climat change
global warming refers to the recent
increase in global temperature (merriam-webster
incorporated,2014)
A mean that also affects climate is the
greenhouse Effect.

the greenhouse effect is a natural proess in
which the earth is warmed 33 degrees warmer than it
otherwise would be so that life in earth can exist .
When the sun's rays
reaches the earth's atmosphere some of the energy is
reflected back into space and the rest is absorbed to
warm
the earth and re-radiated by greenhouse gases such as
carbon dioxide, methane and nitrous oxide
(departement of environment ,2014).

Although the greenhouse effect is a natural process the Enhanced Greenhouse effect ' has recently become an issue due to an increase human activities (department of Environment,2014) the enhanced green house effect is an increase in the concentration of greenhouse gases.

in the atmosphere due to arise in the amount of greenhouse gases in the atmosphere too much heat is trapped in the earth .thos swelling the rate of global warming.

97% of climate scientists agree that the current rate of climate scientists agree that the current rate of climat warming is very likely due to human activity (Global climate change,2013)

this is because the natural trend of climate change through geological time has never shown to be at the rate of the current global warming and the only reasonable explanation is carbon

emitted by human (amber Jenkins ,2012).

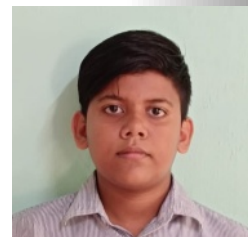

the human activities with the highest level of carbon dioxide are deforestation and burning of fossil fuels . Trees store carbon that thes retrieve from the atmosphere.

By the riverside

*Beside the brook, I strolled on
 Beyond the horizon, I hoped on
 Bickering of river, I heard
 Bear me as I lay, will you?
 From dawn to dusk, I walked on
 seeking for the merry. The joy
 deep in my heart, I could hear
 the chattering of the lake
 the moon with elated bliss
 was hidden in the supphiresky.
 The brimming river envelopod the pebbies
 was embraced in the cold touch
 beside the glen, the river flowed
 echoed monotonously. Its chattering
 from some where but to nowhere
 promised me life forevermore*

ARTIFICIAL INTELLIGENCE

Our world is developing everyday. There has been a huge

progress in the field of technology. CHAT GPT is a good example for the progress in the field of the technology. CHAT GPT was made in 2022

and published in 2023. It is now available on almost every devices. It has laid a milestone in the field of technology. We can get information of any kind through Artificial Intelligence. Artificial Intelligence is also helpful in everyday activities. AI applications, AI camera, AI filters, AI security devices, etc are examples for technological advancement in Artificial Intelligence.

POEM OF NATURE

Nature is good
And don't make us rude
It gives us everything
Without expecting
anything
It gives us food to eat
And gives us shade to
reduce heat
It is so green
And help us to stay clean
With trillions of trees
And stunning cliffs
So, it is our duty to protect the nature
And to stop the melting glacier

SAVING AN INJURED CAT

When I was going home from school.I saw as small injured cat on the road side.I want and bent down and inspeced the cat.It was beaten by some other animals.I immediatily gave in firstaid and than took the cat to the vet.The doctor examined and cleaned the woungs and give some medicine.i took the cat to my home and gave some milk to drink.I made a place for the cat to sleep. The next day I asked my parents permission to keep the cat as my pet and they agreed.I was really happy that I could rescue the cat and keep it as my pet.

GOOGLE MAPS

Google maps was initially launched as a web-based mapping application. Travelers then used it to search for location, view satellite image, and find driving directions. In 2007, Google maps introduced street view. In 2009, the tone-by-tone navigation system was introduced. It helped to understand the driving directions with voice guidance and drive easily without checking the map in 2013, introduced 3D maps, indoor maps and real-time location sharing. google maps explorer comes in 2014

MOBILE PHONE

Nowaday, Mobile phones are an important part of our every day life. The use of mobile phone had been revolutionary. Since the last decade the first form of mobile phones was telephone, invented by Alexander Grahambell in 19th century. Since then, various researches and inventions was there after approx. 170 years of it's invention. Later, cell phone was invented. First, it was only meant for communication recently, the smart phones were invented. That has been revolutionary. Our life will not be "ok" without smart phones. Today, it is used for various purposes. It's use has been expanded beyond communication.

But, nowadays, the use of mobile phones are over. People are always with their phones. They just grab their mobile phone and sit in corner with that. There are so many problems that arise due excessive use of mobile phones. Firstly, the health problems caused by usage if mobile phones are more. It causes a serious disease

called neck pain as we always down our neck to use mobile

CHAT GPT

The evloution of chat technologies:AI and of rise of GPT -3.

Inrcent year the world has witneesed signigficant Advancement in Feild of Artificial intalligence (AI). On a particual aspect of AI that has gained widespread attention is chat technologies. Chat box powered by AI have greatly impronved their abilty to understand and res pond to human languagerevolutionizing the way ofpeople interact with technology

One of the most notable adancement in this pace is the enaergane ofGPT-3 (shot for Generative per-trained tarnformer-3)developed by open AI.GPT-3 is a state -of -the art ianguage generation acclaim for its adeptnessing and generation

what sets GPT-3 apart form its predecessors inits unprecedentea scal with 175 billion parmeters .GPT-3 has been trained on an enormous amound of divers and data enabling it to generate human- like textand engage in meningfull conversation it capabilities extedbeyind more gusion -answers. It can carry out a range of task including translation summarization and even cretive writing

DEVELOPEMENT OF AUTOMOBILE

Development of the automobile started in 1672 with the invention of the first steam-powered vehicle, which led to the creation of the first steam-powered automobile capable of human transportation built by Nicolas-Joseph Cugot in 1769. Inventors began to branch out at the start of the 19th century, creating the DE-RIVAZ engine, one of the first internal combustion engines, and an early electric motor. Samuel Brown later tested the first industrially applied internal combustion engines in 1826 only two of these were made

Beauty Inside

you beauty deep inside
Behind those brightened eyes
Most men will fail to find
with you only as a prize
I can see it vivid as a day
shining from your soul
Hiding from your prey
It truly makes you whole
So wipe away your tears
Set your beauty free
leave behind your fears
come walk along with me.

HISTORY OF CARS

From 18th century the invention of car was made. The old cars were not so fast and had a Better Engine. Then the Year go on the Genius people Found Technolgy which made cars with more Acceleration and more capacity of seats Windows and other useful things etc. The Invention of Lamborgini Made by the Country USA. The first Lamborgini was a Tractor. Everyone disliked by its' facilities. Then later they gave many things t the car. And now the price of Lamborgini was more than million rupees. In the world a small Amount of peoples only have this car. The year go on, many people Invented many cars and people are using their transportation facilities without walking, only driving. Many other facilities vehicles are used for Transportation like bus, train, two-wheeler etc..

FLOOD 2018

The flood in 2018 were cost many disasters. According to kerala 14 distriets were under flood. This flood lashed in kerala between 1 june 2018 to 18 august 2018 were much more than the normal.

People had to leave their homes to safer location so as to escape from the uncommon floods caused by havey rainfall. The average annual rainfall of kerala is about 3000mm.Ninety percent of it occars in a span of six months through south west and north east monsoons.The heavy rainfall dueing monsoon months causes heavy water flow in all the rivers .

Resue operation during flood

It is an incomparable experience that Kerala put before the world on how a whole society can engage in rescue operations in the event of a disaster. The public establishments including the school provided asylum to those rushing out of their drowning houses. The local people, their representatives as well as the officials helped them. As flood rose to uncontrollable limits .

Army, Navy and Air force swing in to action. Different departments and officials under the Government of Kerala worked hard throughout day and night. It was the fishermen who served as active life savers by tackling the flood differently. The Kerala society acknowledged them by mentioning as “the own army” of Kerala who defeated the flood. It was the incomparable rescue activities which reduced death toll.

FOOTBALL

Football is my favourite
game

I love to watch them play

Those tightly muscled
butts and legs

On an awesome autumn
day;

How fluidly and
gracefully

They dance across the
green

Such elegant contenders
play

The best I will ever seen;
some people think I am crazy

The way I love the game

But I did rather be watching football

Than anything I can name;

Of course I may maise and blue

That BIG 10 team that rules the league.....

You rock the Big House-BLUE

EMMANUAL JAIMON JOSE

NOT A DROP TO DRINK !

The available fresh water sources are on the verge of depletion . The total quantity of water on earth is constant .Hence the percapita availability of water decreases with increase in population .Increase in the consumption of water has also influenced the availability of water

WATER CONSERVATION

water scarcity and drought if we make use of the rain water effectively. Flood can also be controlled to some extent through this. Soil is the largest store house of water allowing each drop of water to percolate at the place where it falls is the basic principle in water conservation.

GEYSERS

The phenomena of severe ejection of water from within the earth at regular intervals is known as geysers.

*

WETLANDS

wetlands are natural sinks of surface water paddy fields, ponds, swampy region and all low lying region come under the category of low lands the water stored here from part of the ground water reclamation of the wet lands which are the natural sinks of water will lead to several environmental problems like the following

- * lowering of water level in wells.
- * floods become common in rivers even in slight rains

SOME ACTIVITIES HELP IN COLLECTING AND STORING RAIN WATER IN THE SOIL !

- * conservation of wet lands
- * protection of forest
- * terrace farming
- * mulching
- * construction of check dams
- * construction of mud walls
- * digging rain water percolation pits
