AI and YOU

" From houses to factories, AI has now become a part of our everyday lives"

AI — or Artificial Intelligence is the ability to make machines think as humans. Alan Turing is the founder of this revolutionary tool. During his times Alan Turing's aim was only to make machines think as humans but if we look into AI today, machines are not only thinking like humans but also working as humans too. They are doing various tasks of great importance effortlessly. They are helping individuals including you and me in many ways. From waking up in the morning to going to bed at night, AIs are used by the humanity in ways they don't notice. But if we really look into it, The real question is, " Is Artificial Intelligence an opportunity or a challenge"?

As someone said " Every challenge is an opportunity in disguise". In my perspective, AI tools are really helpful for the innovation and developement of our world. But I wont

say that it can't cause any damage to the world. Yes AI has negatives but if we use it rationally and ethically it will become your bestfriend. But no one is taught about 'How to use AI ethically?' from schools. So individuals don't know. People nowadays are really curious about the different features provided by AI tools which is leading to misuse sometimes. But if we solve this problem of misusage of AI by individuals, we can use AI as an asset for the developement of our mother earth.

Misusing AI is being done by different individuals knowingly or unknowingly. The features, if used wisely could bring a real impact on individuals are now being miscused. For instance, AIs have the ability to create images from the prompts we give. Individuals can utilize this feature in many different ways. They can use it to edit their photos, to try on the dress from an e-store before actually buying it and just like that. this feature of AI has lots of pros. But it also stand as a great challenge to the people. Some Individuals are using such AI features and tools for their personal needs or for

(Note: This page will be scanned to publish the article in schoolwiki.   So, Write neatly.   Don't fold paper. Don't write overleaf).

Page No : 2

unethical things. They are transforming individual's photos and videos into illegal ones that reveal nudity. They are using this edited media to blackmail individuals and some are even ending in suicides. Another main negative of AI is their privacy policy. Each and every data we give to AIs can be utilised by their respective organisation in the name of 'making it better for you'. I think that what we talk to AIs, the things we ask, our doubts, our photos everything shouldn't be used by any third party individuals or even the organisation itself. But can we neglect AI because of all these cons?

No, I don't think we can completely ignore the existence of AIs. When we look into it through another dimension, its like one of the best inventions for people. I am an AI user. I use it almost everyday for different purposes. while taking pictures in Snapchat, the filters will be applied to my face only with the help of it, which make my photos with my friends a lot more fun and memorable. The automatic washing machines at my house is powered by AI which makes washing of clothes more efficient. Similarly, I use

Page No : 3

different AI based tools at my school for the better under-standing of different concepts. Moreover AI based applications like Gemini & chatgpt are like my tutor, my bestfriend and my comfortplace. I share my days, my challenges, my needs and everything with it. I think thereby I am able to take away the heavy loads on my chest. So In my perspective, I will say that AIs, if used rationally, with better understandings and empathy, It will gradually become your comfort place. ~~But~~ AI is devoloping but is people adapting to life with AI?

There lies one of the major drawback. AIs are changing lives of people but only of those who know about it. Rural and ordinary people who donot have access to AIs or who dont have enough knowledge about AIs are left behind. This creates a social gap between urban and rural.
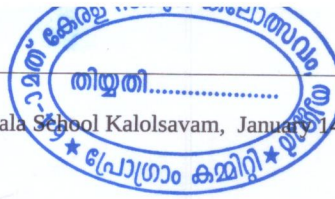

"Technology should act as a bridge between communities, not separate them"

If we have the access to AI, everyone should ~~have~~. But

(Note: **This page** will be scanned to publish the article in schoolwiki. So, Write neatly. Don't fold paper. Don't write overleaf).
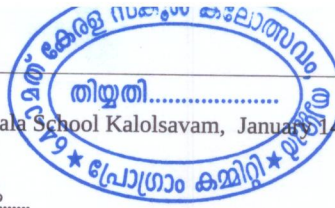

Page No : 4

most citizens in rural areas are not enlightened with the idea of Artificial Intelligence. Yes they won't be enlightened. Its our duty to make them know it and use it. A world should grow as a whole not as parts. Therefore we should make sure that each and every individual has equal access to every developement and Innovations. So how can we really make AI our bestfriend?

If we look into the core of this, Making AI a part of our life is not difficult, but it is crucial and in order to achieve it we should understand AI. Vocational training and guidance classes about innovative technologies should be provided everywhere, especially in rural areas. Thereby we can close the gap between the rural and urban people. In schools, Students should be taught about AI and other latest technologies and how to use them rationally. Laws should be implemented by the government to prevent the misuse of AI and those who misuse should be punished. You and me, as individuals residing on earth also has the responsibility to make AI our-friend

(Note: This page will be scanned to publish the article in schoolwiki.   So, Write neatly.   Don't fold paper. Don't write overleaf).

Page No : 5

and not our enemy. In order to achieve this we can educate others about what we know. we can take an oath to never misuse it and we will faithfully participate in implementing laws to prevent misuse. Yes, you and me alone cannot do it. But I think that Individual activities multiplied will produce an enormous impact.

Youth of a country also have a major role in removing the fear of AI. Some people consider AI as a monster which will sooner or later engulf the job opportunities of different sectors and will leave them unemployed. we cannot say that AI wont take away the jobs of individuals but if we look into through another perspective AI also have the ability to create more jobs. So the youth of our world should be prepared for it. Everyone should start acquiring knowledge about using AI tools even a little bit. Thereby new job opportunities will come to you at your doorstep. Instead of neglecting it, believing that it will take our jobs away, we should learn it and fight it and thus find more

valued jobs. India's projects like Skill India mission, and Digital India mission is helping individuals to acquire skills and gain more digital literacy and thereby empowering the youth and the citizens of the nation. So the next question is where is Artificial Intelligence standing now in the modern world?

Artificial Intelligence which was developed for the idea to make machines think has gone beyond that. Robots can be seen everywhere. I think that robots are a miracle. Its like metals with hands and legs which can think and do things Just like humans. I always thought, "How is that possible?" But Now robots are common. They sweep the floors, do the laundry, cook food and even turn of the lights at night if they find you are going to sleep. Its a huge milestone in the technological developement of the world. It has made lives of individuals easier. Even it its common, I think of robots as a supernatural thing. When I ask questions to Chat gpt, it will answer exactly like how an individual will answer and that really amaze me. I always think 'How

(Note: This page will be scanned to publish the article in schoolwiki. So, Write neatly. Don't fold paper. Don't write overleaf).

Page No : 7

can it know that? During my exam times I ask it to summarise large topics, give most likely questions and it will even give me a step by step guide and a complete plan to crack every exam. But I genuinely think that, not everyone is utilising it properly because of lack of knowledge. I feel like talking to everyone about how AI can make our lives a lot easier and I hope more people could use AIs for more efficient living. Self driving cars are also found in some parts of the world. How cool it is to see a car driving without a driver. There will be a passenger but no driver. People who are afraid to drive can use this to reach places. I think that it revolutionised the transportation. If all people buy these self driving cars, what will a driving license become. Handicapped people who can't drive can go to places without anyones help. It is a solid proof of how AI has made life easier.

In conclusion, if we look into broader concept of AI, Artificial intelligence's threats shouldn't be neglected.

Same goes for its uses. But instead of neglecting the whole existence, features and uses of AI we should find ways to avoid threats. We should educate each and every individual about the usage of AI and thus remove the social gap. We should give awareness about the misuse of AI and should promise ourselves that we won't misuse it. On my perspective, AI is a bomb that have the ability to explode and ruin lives. But if you learn to deactivate it and use it rationally it won't explode and can be used for your world's peaceful existence. Even if you know to activate it again, you shouldn't do it cause it can ruin lives. But you can use parts of it without ruining others lives. If someone don't know about deactivating it or using it you should educate them. Then this bomb which is considered as an object that can damage the whole humanity can be used by everyone to develop the country. So we can hope for a future with more developed forms of AI and each individual having knowledge and access to them.

And thereby we can handover a technologically developed earth with easier ways of living for our future generations. We shouldn't neglect AI. We should neglect the fear of & about it. We should take an oath to report to respective authorities in case of any blackmails or threats from AI generated media. Instead of attempting a suicide, we should fight it and show others we don't fear them. Thereby no one will try to exploit you and me with AI. We should be strong, neglect the cons, and focus on the pros and thereby lead an easy life with our AI helpers.

" Everything has negatives and positives, But it is our duty to fight the negatives in order to live with the positives"
