

①

Environment

②

Environment is the place where different things like biotics and abiotics are live.

Everything in the world is a part of environment. The environment contains air, water, food and sunlight etc. Environment effect all the living beings including plants and trees. It is the life support system.

As we all know that earth is the only known planet having life in this universe. So ^{we} should respect and maintain everything we get from our mother earth. We should save the mother earth. So that our future generation can live in a safe environment. we can save the earth by saving trees, natural vegetation, waster, natural resource etc.

Environment is polluted by the humans. There is human made environment and ~~man made~~ ^{natural} environment. Natural environment is effected by the human activities. Some of the major types of pollations are air, water, soil, noise etc. These pollutions are mainly

② caused by human beings.

pollutions are causing diseases. Air pollution caused major types of diseases. It causes respiratory infections, heart diseases, strokes and lung cancer etc. Water pollution is also causing diseases. While drinking water, illness is caused due to the presence of micro organisms in the untreated water. Soil pollution is effected not only for humans but the plants and animals are also to be effected.

The major environmental issues are forests and agricultural degradation of land, reckless deforestation, desertification, construction of buildings, Building of river valley projects for increasing irrigation and electricity supply, and mining activities. Increase in population is also causing environmental pollution.

The living evidence for environmental pollutions are the black colour present on the white marbles of Taj Mahal, The hole formed on the ozone layer, the pollution of the precious Ganga river. The construction of dams on the bank of Ganga is restricted due to the pollution. Now the condition of our India is very bad. Now a days the Oxygen is selling for money in Delhi.

(D)

pollution can be decreased by taking remedial measures. plastics can be reduce, reuse, recycle. Paper and cloths should replace plastic and polyester. plant more trees in the environment. Avoid using insecticides, pesticides and inorganic fertilizers. Factories should release ~~water~~ ^{chemicals} after giving necessary treatment. So the effect will be reduced. So our environment should be saved. Save the environment and live healthy life

"Wasting time is useless cleaning"

"the environment is the best"
