didn't depend on others. They ran fast and in

time on the road of self-reliance.

The

path of self-help and reliance is strewn with

thorns of difficulties but at the end, there are flowers of glory and success full of rarest fragrance. SUPPORT FAVORABLES HELP etc .

difficults. or sharply tried, or oppressed by  
failure, for these things are designed to  
intimulate us to higher and purer effort and  
to teach us the greatest and glorius lesson

## SHORT STORY

## A SCIENTIFIC DISCOVERY THAT CHANGED THE WORLD-PLASTIC

The world's first fully synthetic plastic was bakelite, invented in New York in 1907 by Leo Baekeland, who coined the term plastics. Plastics are a wide range of synthetic or semi-synthetic materials that use polymers as a main ingredient. These plastics can be moulded, extruded, or pressed into solid objects of various shapes. Plastics typically are made through human industrial systems.

MOST MODERN PLASTICS ARE DERIVED FROM FOSSIL FUEL BASED CHEMICALS like natural gas or petroleum. In developed economies, about a ton of plastic is used in packaging and roughly the same in building applications such as piping, plumbing, or vinyl siding.

In medicine, polymer implants and other medical devices are derived at least partially from plastic. Worldwide, about 50 kg of plastic is produced annually per person, with production doubling every 10 years.

Many chemists have contributed to the materials science of plastics including noble lord Kricheldorf who has been called the father of polymer chemistry and Herman Mark known as the father of polymer physics. Most of plastic products are created for one-time use in the medical field which helps to prevent the spread of dangerous diseases by eliminating the need to sterilise and reuse a device.

The success and dominance of plastics starting in the early twentieth century has caused widespread environmental problems, due to their decomposition rate in natural ecosystems. Towards the end of the 20th century, the plastics industry promoted recycling in order to ease environmental conscience. The presence of plastic in the environment hurts ecosystems and human health.
