

Topic: Modern Technological development and human values - Explain.

Towards A New Era..

Today our world is growing even smaller, social-media and internet have opened the doorway to accumulate unlimited knowledge and new bonds of friendship. Today everything is at our fingertips. The ascends of man, just one of the species who lives on this planet is because of curiosity. He wondered about everything. Curiosity is the sperm of technology. Technology makes our life more easier, smoother and simpler.

✓ The human body is a complicated machine. God made man and man now creates more marvellous things than that of god. Now robots will do the work that no man ever dare to do. Outoff the world's total population 98% people uses a smartphone or a mobile phone.

Let's have a look on our past generation.

Crimes are increasing rapidly throughout our nation and throughout the globe. Now no woman in our country dare to walk along the street at midnight. Cyber crimes are increasing day by day.

Do we lost our values along the development of technology? No, we have losted our values due to the misuse of technology.

Most students are now addicted to video-games. Some video games are about shooting, fighting and killing the opponent, this creates several behaviour problems to the students. Pornography, another trap in the virtual world which feed on ones weakness. "If wealth is lost nothing is lost, if health is lost something is lost, if character is lost everything is lost", likewise Pornography ruins the whole character of a person. I personally appreciate the government and the network providers for banning pornography in India.

Most people are getting lazy nowadays. The playgrounds and pools all are vacant, children are playing mobile games instead of playing in the grounds. Mothers don't cook in the kitchen, they just order food online. Social media makes us near to people who are far away, and makes us far away from the people near us. Although Technology has made our life easier. In the old days our parents and grandparents got to school by walking. Sri Utharoor Vijayan our former president got to college by walking 24 km each day. Now we can get to school with the help of modern transportation.

facilities.

"God's own country", our state Kerala faced a severe flood havoc at the month of August at this year. The all 14 districts of our state was in Red alert. Although 498 people died in that merciless flood. People failed to communicate with each other, at that time our youths made an effective use of modern technology. People around the globe use the social medias just for fun and timepass, but our youths converted this social media into online control rooms, which brought together all the flood relief activities within a single day.

At my point of view the modern technology is just like plastic. We use plastic everywhere in our day to day today life. We can't even think of a single day without plastic. But if we burn or throw plastic into water bodies it creates pollution, it affects whole of our ecosystem. Likewise, we can't think or even imagine a day without the use of technology, we have to it carefully and wisely. Now the number of Cyber crimes are increasing, the bad news is that the people behind all these crimes and most of the victims of these crimes are students.

Alexander the great said, "I am not afraid of a army of lions led by a sheep, I am afraid of a army of sheep led by a lion", likewise the parents and teachers have to educate students for the wise use of technology and to stay away from the traps which awaits for them in the virtual world. Modern

Technological development brought vast changes in the field of medical science. If you lost one eye don't worry, wait for a donor and transplant. Now we can see excarts only in books, now we are using vehicles which are propelled by fossil fuels, out of the knowledge that if the combustion of fossil fuels are not eco-friendly, we are now talking about electric vehicles. It is said that in 2030 India will totally switch to electric vehicles.

"Every action has equal and opposite reaction", likewise which is Newton's third law, likewise some milestones in the field of technology has its own consequences. Yes, we have split the atom, it is the same nuclear fission which created nuclear war.

In the field of industry many factories developed which polluted our water bodies, polluted our air causing

Global warming and Greenhouse effect which caused the extinction of several species.

If an accident occurred in a highway people are rushing towards the accident area to take a selfie and post it on social media, if that people tried to save that man they can bring him back to his normal life.

Human values have become cold as ice nowadays. The madness of imitation is now growing. I imagine that a 100 years before people wrote using a feather of a bird by dipping it in a bottle of ink, and now we are using pens which are available to us in a fair price.

America's Neil Armstrong is the first human to step on moon and by ~~the~~ laying ~~of~~ likewise it just was a simple footprint but it was ~~your~~ giant leap and milestone in the field of technology, and now we are talking about Mars the red planet, by settling down in mars the chances of extinction of the human race will become 0%.
likewise ~~the~~ technology help us to cross over limits and to become limitless. Thanks to modern technology our class rooms have become highTech class rooms, with the help of visual and audio technology learning have become ^{a lot} easier.

Although modern the technology has made man more selfish, he doesn't even care about others. In India the technology is rapidly developing. Mangalyaan is the one and only satellite to reach Mars in its maiden attempt, whole Indians can become proud of it. The growth of IT technology has made drastic changes in the field of Engineering. Now there are large bridges connecting villages, states and even nations. The growth of IT technology has also made dramatic changes in the field of agriculture, now machines will do the work we just have to simply control them.

The growth of technology is the growth of human race. Through technology we can achieve the impossible. Alexander the Great says, "There is nothing impossible to whom, who try", but now we can say that there is nothing impossible through technology. From just a wooden block we made wheels, from just a spark we made fire & likewise from small things we can make a big difference.

The ascend of man is because of his curiosity. Technology makes our lives more easier, simpler and smoother. We can't

even think of a second without technology.
Technology makes life easier but it
makes ~~of~~ man more lazier, if we
don't use the internet wisely
it will ruin our entire life.

Medias make children lazy, they are
not interested in sports but they are
interested in video games it also
causes health problems. We need a
generation with raised heads not
bowed. So let us make a wise
and careful use of technology towards
a better ~~tommo~~ tomorrow and towards
a new era.
