

## WATER FALL IN THE GARDEN

Take Water in a vessel . A hole is drilled in one side of the vessel and a PVC pipe is drilled in it to provide water to the plants in the garden. On top of this vessel we can also place an object made by passing a pipe through in side it. Take a motor , connect the motor with the pipe inside the object . When the motor is powered on, the water inside the vessel rises through the pipe and look like a small water fall. this water fall inside the vessel and rise again through the pipe and so it continue

The water reaches the base of the plant through the pipe connected one side of the vessel. So decorate the garden and watering the plants.
