

A I AND YOU

AI or Artificial intelligence, As we all know in All the field's AI is involved in Social, economic, Scientific and even personal life's. Well about AI. As All the creature has two phases AI also has two face. Sometimes Bay or Boon. There are merits and also De-merits of AI. Therefore, AI is involved in each and every Sector. If I say AI is good for the development of our nation it may be right but at the same time it may be wrong because it helps develop the country but defect's in the bad minded personalities will be increased. If AI is taken as a topic in form of oral it is amazing for students and even written it's helpful and at the same time if taken in the editing field it is really difficult and it may be said that it depends upon the user.

AI in the field of Science:-

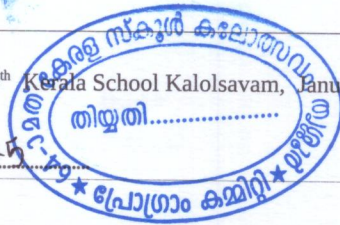

AI is not something that we think only as the editing app it is the app or a microsoft device that helps to boost the brain of student even in negative or positive manner. Well the distance, centuries, speed, time etc are clearly mentioned in AI related app. even Google is connected to AI. About the Radioactive elements, the distance of Sun and earth, The direction of routes, each and every particular matter is related to AI. In the science field itself we can say or divide as Geography, Biology, Chemistry, physics, Economics etc and can say or explain that as per connection to the AI. AI has a big role in the common life and that can be taken as a tribute to the people's of Indian. As the India was undeveloped country before.

(Note: This page will be scanned to publish the article in schoolwiki. So, Write neatly. Don't fold paper. Don't write overleaf).

i] AI in the field of geography - The # Elements or devices like GIS, GPS are purposely connected to AI because when the signal reaches the "AI or phone" it responds and finds out well it made big tribute to Indian police for the finding of wanted personalities. $\therefore$ AI is involved in the field of geography as a fastest connection provider.

ii] AI in the field of Biology - The treatmental machines like chemotherapy, diagnosis etc. are connected to computer and highly advanced techniques well when the "Computer or AI" works only then the doctor can find what the patient has & actually happened and can move forward with further Analysis and treatment. $\therefore$ AI in the field of Biology is also very important and efficient for the purpose of developed country and developed education systems.

iii] AI in the field of Chemistry - As we all know each chemical has a name and each name has a meaning and we also know that the each they try helps in forming new chemical bonds. In this field AI may not have big role but has role in each and every field. As we know we need microscope, endoscope etc... for the purpose of chemical treatment but it is also connected to AI that is, The AI helps to find the defects through the high and low lenses.

iv] AI in the field of economy - The AI created a heavy defect in the life of people as well as merits in them and i. AI can help in created the technical Robot's which may to the decrease of pollution and will increase population and as similar to that the income of people will increase and as further income of national will also $\therefore$ nation developed.

AI has significance in many fields ~~in~~ even though in the field of civil, calligraphy, Editing, Drawing and Sports related the main factors that promote AI is that it is useful in these fields.

AI in the field of calligraphy - The calligraphist may use different types of letters, fonts, colours and designs and therefore AI provides them for eg: canva, plex etc...

AI in the field of Drawing and Sports - It provides the techniques How should a Sport should be ~~be~~ taken place and also composes the presence of the failure as per to know how to overcome that. And in the field of drawing they provide many drawing, paintings, sketching Apps which will help to build our Artistic Skill and increase the Availability of the very important painters.

(Note: This page will be scanned to publish the article in schoolwiki. So, Write neatly. Don't fold paper. Don't write overleaf).

AI in the field of editing - well the main point of AI where users may misuse them and where the users may develop their skills also and that is why AI is known for well as we all know the apps like Ubuntu, VN, Flow, Canva, adobe etc... help in editing pictures but those depend upon the users that they may not misuse them and therefore that is the reason why we get more messages from the internet related apps for the safety of our phones and cameras. as we all know that AI can access the users to create bulky pictures and blackmail them with that and earn money. Sometimes it also hurts the heart of the film actors because the filmmaker can also do this picture editing with their own permission. AI plays a great role in editing and also it may increase general knowledge.

AI in the field of film making :-

I clearly don't know but I have come to hear that AI has made a great role in film making as the barmer's created, film editing's, poster making and ∴ The music and audio editing but the critics also say some of the direction' giver's have been misusing their authority because they use mobile as the unwanted picture creating element but I feel each and every picture they create will be with the permission of the actors and if not it is the Boon of AI as AI ~~has~~ helps in editing those things in those way.

AI in the field of civil - well not
more contributions but AI helps to find jobs in civil field more earlier and also the mechanism of gun's, bullets is the techniques of AI.

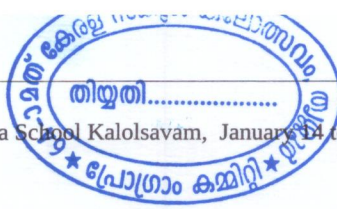

So, what ever I said in these pages was a quite introduction of AI in each and every field purposely. Well If I say about AI inference in my life there may be many things to say. That is, what I probably felt of AI was "an editing app" but what it really means is that it is a Artificial intelligence that is "Art of brain". Well after realizing this I have tried many field journal, story, poem, novel, video editing, painting, drawing, rapping and even job finding and at a small point I feel myself becoming something in my life and that things will be something legendary. not completely AI but AI has a small role in my life plan's and how I started was first I started exploring and what is exciting is this

(Note) This page will be scanned to publish the article in schoolwiki. So, Write neatly. Don't fold paper. Don't write overleaf).

this... was... also... searched in AI that how...
Should I start writing a journal or...
Novel or even how should I create...
Story So by a long thought I came...
to a conclusion with AI [meta, Google]...
that I will explore, research, find,...
implement, check, compile them and...
publish but All my 5 turns were stopped...
at some point and you should know...
that for this purpose I lost my...
Sleep and Exam mark and was scolded...
by my parents but what is surprising...
is at even that time AI was...
present for me with some motivational...
quotes: ~~an~~ Now you have clearly...
understood that why I have said...
repeatedly that AI has a main role...
in each and every field: yes then back...
to personal connection to AI. well know...
I have left that dream and...
stuck to another and here itself AI is reason

Okay, Then what is the problem of AI that I have noted and stopped using AI related to that editing sequence. The main matter is that AI provides the editing formula to even harass the life of people. Second is that AI also created defects in the lives of people who has undergone through those and as we all know the other reason is that AI provides the Answers for each and every search ~~related~~ even related to unwanted discoveries and those which may ~~be~~ also be skipped or switched or even explain but from one side I also think that it is not the problem of AI because it is its duty. Whereas it is the fault of the users who use it as unwanted Applications. Well another reason is the distraction that as I said I have had the experience of switching of my

dreams in similar way the people or students may get distracted and may switch their dreams but what is the harm is they may have attraction to all the field and may not be able to ~~st~~ stick in one or even two and loss life in depression and start using intoxicants. Well in this matter AI is a disaster and AI is considered as Devil - well in the field of approach that is the childrens who get addicted to the bulky pictures may get addiction to the "intoxicants" and may cause unsuspiciousness like rape, suicide, murder etc... and even robbery but why and what is the role of AI. AI has the oblicated factors to change human brain thing and may provide different types of word recycling which were unknown but know got to know. Well It is the main

(Note: This page will be scanned to publish the article in schoolwiki. So, Write neatly. Don't fold paper. Don't write overleaf).

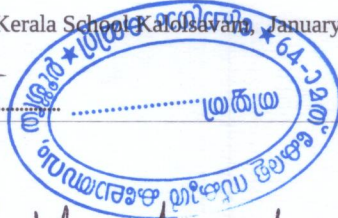

defect of AI other wise we have or
I had many benefits from it that
is even in the essay field and educational
field or kalolsavam field.

AI in the field of Essay :- As, I
told because it is the main platform
where we need to think and write
but as we all know without general
knowledge and Arranging Sense we
cannot but for that we cannot
come country to country as per
expense. But AI can produce the
records of research and the Arrangement
of writing even in each and every
basic language so that we may not
be confused and may not be disabse
to write such types of lecture's even
for teacher's and student's it helps
to identify the perfect speaking techniques
and establish correct form of writing.

AI in the field of education and Kalolsavam:

well commonly we all may know about this that AI is a kind of app from which we can ask and create presentations, seminars, projects and while we present it we may present in a good manner and disciplined version. well, when I say about Kalolsam the records of the previous years arts will help us to create a "bold and confident you". well it is also provided by AI and so AI has the significance in this field more and as we all know that when AI can help in these field it may easily in study field too. therefore AI helps in providing "Syllabus pdf" and class notes and if sometimes we don't know the answer it may help to find it and clarify it very easily with sufficient notes and class videos and even

Why do we don't need AI OR what
are the Charges to be brought in AI
Influence:-

The AI providing freedom to make unwanted videos, pictures, graphics must be stopped and texted the message that it is unable to do those types of elements and also ensure the report to police so that they may not hack it and other may be scared of doing it. The another charge is that the # Each and every mobile phone which uses the access of unwanted search must be recognized and also the government should add fine to that so that the next person who is gone do that should be scared of paying tax ~~or~~ or be ready to pay tax as the content they searched in unusual and discussing.

(Note: This page will be scanned to publish the article in schoolwiki. So, Write neatly. Don't fold paper. Don't write overleaf).

Participant Code: 063

CONCLUSION

Therefore [∴] I conclude that AI has many merits and demerits which can be changed, reconstructed or even explained to the users who are going to use it. but If I say AI is not important to our normal life I will be great foolishness. because without AI we can never create seminars, presentations, Data collections etc.. [State level] and Distance, Direction, Artistic [National level]. So the users can say that they will never misuse AI and may protect our country's reputation gradually as a well-being, sincere, and respectful citizen of india or even other country...
