“What we as students can do to build a new Kerala.”

As everyone say that the children's are the future of our next world. we should ^{teach} ~~teach~~ them the things they can do to build a new future. Being much safer and easy to live. As today the world is changing into new. By the new inventions by the young people. we should teach them what they can do to build a new world. after some years the world is going to be there and we should make them capable for everything they have to face.

We as students should do to protect our land. ^{Kerala} we should build a new Kerala making safer for the next generations. The students should realize that they are the ones to build a new Kerala with much more facilities, technology

403

and better economic facilities. The major problems Kerala face nowadays are the environmental problems, Lack of hospital facilities, lack of technology and one thing of the Kerala faces lack of education make their surroundings clean and make better transport facilities and better educational facilities. These are problems that can be solved if the people here try to solve it.

The students should join in the Junior red cross, SPC, SSS, SCAH and guides club make them more friendly with the environment. If most them become familiar with the environment they can solve the problems like deforestation by planting more trees and plants it will provide us fresh air. Now most parts of the Kerala's air are polluted and also by the activities of these they can prevent the pollution due to plastic. They should understand the consequences of banning plastic.

Item Code: 644

Participant Code: 403

Nowadays due to high pollution the global temperature is raising making the climate changes. The rapid changes in the climate causes environmental problems. If the students understand the importance of environmental protection, it will make a change in Kerala.

The students should be friendly with the health facilities. as we learn about the precautionary measures if a medical condition arises from the class, we should make use of it and help others whenever they in need of the help. If we do so the others will also try to help each other. And as part of the guides, Scouts and Junior Red Cross the students should clean the hospitals once in a month which make the others also encourage to do that and they should also clean their schools and the surrounding and also their houses. The others will get encouraged by this and do so.

As technologies are advancing these days by the inventions like Artificial Intelligence. The students should use such things for their education and try to advance the technologies in Kerala to a better level. Most of the countries are getting advanced by the technologies. As they teach their children's what is it and how can we make it use to develop their country, state etc. we should also learn and tell the other's what we learned and make them understand the help we will get by understanding the technologies. Many places developing by the advancement in the technology it will attract the people and students from other countries to come and study here. Like the students in the Kerala do now as the technology of Kerala are not advanced to the best level most of the students are trying to go to other countries for better education. But if they teach the students about the

Item Code: 644

Participant Code: 403

Technologies early it will help the students to advance the technology in Kerala into next level.

We should clean our environment and surroundings of our school and ~~area~~ our own houses so that we can prevent many diseases and environmental problems. On the rainy seasons the students should make the people around them that understand the importance of cleaning their surroundings to prevent the diseases like dengue, malaria that come because of the air cleaned environment around us. The students should conduct constructive programmes with the public to make understand the importance of cleaning their surroundings. The air pollution streets and roads are the one major problems of Kerala. If we students do so it can be reduced to a great extent.

Item Code: 644

Participant Code: 403

The transportation facilities in Kerala should also be aware to get advanced. Most of the people drive without license, helmet or under age people also drive the vehicles. As students we should obey the traffic rules and drive the vehicles by the rules of traffic. And the students should make the public aware of the importance in obeying the traffic rules. A lot of people neglect traffic rules. By educating the students the importance of obey traffic rules they will obey the rules and it encourage the others to do so.

The students should also work for a better educational facilities. The students should make changes in their learnings. By making so the others also get better educational facilities. Only if there is a better educational facilities the can learn about any thing and the education should also with the help of internet it makes the students understand.

and the topics faster and they can also share it with the others and all which makes the education more simple and efficient. They should participate in encouraging programmes and make the other aware of all the things they have learnt. As the students know most of the right side and dark side of the society they should make the other people aware of this which can be help full to build a new.

we the students also make inventions that will be useful for the society. As the students study a lot more about IT. They should make the apps and others that will be useful for us. The students should tell everyone the emergency numbers which they can call when they get in a danger. The students should make an app for the people living in the hilly places and along the river banks and the seashore which make them alert of the erosion, flood, drought etc.

Item Code: 644

Participant Code: A03

The people living the seashore faces a lot of problems nowadays - the students should make them how to live according to the needs of the seashore. As the people destroys the rivers and others to make new buildings it reduces the flow of water making it cause flood, drought etc. which makes the life of the people residing there miserable. Students should make the people understand the consequences of their actions. And teach them how to reduce it.

As the students we can make the people aware of the environmental problems their cause and precautionary measures which make the situations like this less dangerous. we can make the public aware of the consequences of our actions.

And the students should also make the things that help the farmers. For mees one these who live most miserable life nowadays. we should make the public aware of the importance

Item Code: 644

Participant Code: 403

to farming and their problems. The students can help the farmers to some extent.

We should also work for the protection of the animals. It is not only care it is to the animals to but man is trying to do anything he likes without considering the protection of animals. Kerala is a place with a lot of wild animals. The students should work for their protection or else they will go extinct and our younger generation won't be able to see them and be able to study about them.

By making the tourist places in Kerala clean and with more facility. It will attract the tourists and give a better income to the state which will help the government in advancing the educational facilities, hospital facilities and transportation. These are the things which we students can do for a better educational facility.

Item Code: 644

Participant Code: 403

These are all the things which our students can do to build new and better Kerala with much better facilities, transportation, sleep, and a safer place. On doing these things we can change almost all part of the Kerala and build a new Kerala. The students are the creators of the Kerala. If we do to make some changes now it will give the next generation a new Kerala which we never thought of. All these will help to create a unity among the people which will be useful for the building of a new Kerala. And first our students should do all this and after us everyone will do it and make Kerala transformed into a new Kerala. which everyone wish to and Kerala will really become a 'god's own country'. and also as students we should use our talent to build a new Kerala. we are the future and we should make future a better one for our next generation. If we students
