## Topic Educational system and social commitment.

It is most truly said that destiny of India lies in her classrooms. Education is an integral part of our society. Education is considered as the reformative process, moulding one's character and attitude. One of the major aims of education is to instill ~~edu~~ social commitment among the youth. Creating scholars is not the ultimate aim of education, it all about the multi-dimensional development of an individual.

As far as I am concerned There must be a change in the academic structure of schools. If we want to apply creative way of teaching in our schools. A keen focus should be <sup>given</sup> ~~provided~~ in

nurturing the inherent ~~ab~~ abilities of a child. Good teaching methods can be implemented for instilling moral values in children. Both families and schools must take serious concern in the character formation of a individual along with his academic excellence. Only a person with values dedicates his intellect for the society. An educational reconstruction plan should be taken by experts for the refining of the attitude of children.

There are many drawbacks in the current education system. The stereotypical career concept is pulling children into immense pressure. Education is self realization of our passion. But due to the pressure from the society many students lose their chance to discover their passion. Only if we are passionate we can dedicate ourselves our life for doing it. Then only we can contribute our abilities to the social development. The present education system <sup>gives</sup> ~~only~~ focus on

Securing opt maximum marks in the examination. Even though ~~It's very~~ there are many schools and teachers who think divergently and promotes various qualities in students. Many of them are focusing on enhancing leadership trait, Collaborative learning, cognitive thinking and creative thinking. Such activities of teachers should be recognised. I strongly believe a generation with these abilities could only move our country forward. Such students will be committed to the society. These type of creative ideas must be expanded to the whole country. Then we can create a bright future not by creating technical experts but socially committed individuals. We want technical experts in various fields to enhance our research. ~~is~~ But If these technocrats are socially committed It will be a great success for our success. The tibetan proverb goes "A child without education is like a bird without wings". ~~Only the child~~ Only a value based

educational system enables the child to expand his infinite potential for the welfare of society. The children must acquire ~~and~~ be inculcated 'patriotism' in their minds. 'Brain drain' is the major problem faced by our country. They must use their intellect for the advancement of our country rather than ~~seeking for income~~ ~~or~~ migrating to other countries for pursuing more salaries and better quality of life.

In the words of Nelson Mandela  
"Education is the most powerful weapon that can be used to change the world".  
The amount of knowledge a child perceives is not what matters but how much he uses it for the society is what matters.  
In my opinion there must be a change in the way each subjects are taught in school. The primary education is the foundation of one's life. In primary classes teaching language can be done through games and interactions. A student must acquire scientific knowledge through exploring nature.

We should observe each and every creature around us. Such a person could do ~~nothing~~ <sup>nothing</sup> ~~anything~~ harm <sup>ful</sup> to the environment.

Education benefits only when a person could ~~per~~ preserve environment. If we must feel

love towards all creatures around us. Then only we learn science in its full sense. I propose this is one of the major aims that one should acquire through education.

This is land with great tradition and culture. The history and geography must be taught in ~~broder~~ broader sense in order to nurture a youth who understands the

value of our tradition that our ancestors have cherished. Otherwise the future of India remains in dark by ~~underinform~~

underinformed or highly ~~mis~~ misinformed about our ~~+~~ culture and tradition. Only

a generation who is aware of culture can only love ~~of~~ our ~~alt~~ tradition and preserve it forever. Such a generation

could only work relentlessly for the welfare of our country. They could respect the

plurality, diversity and inclusivity of our nation.

A shift from conventional education system is the need of the hour. The education system proposed by Rabindranath Tagore has great significance even in the modern era. He gave emphasis to universal brotherhood. We can also adopt many methods of education in ancient India along with our modern creative ideas. The education plan proposed by Mahatma Gandhi 'Wardha education plan' which gave emphasis for vocational training along education has great contemporary significance. As education is said to be the multi-dimensional development of an individual a great focus must be given to physical, intellectual, social and spiritual development of an individual. Of them social development has first and foremost significance. Peer group learning is way to promote helping mentality of children. Thus collaborative learning has great importance in the social development process of an individual. Good communication

skills must developed among students. Then only they will be able to engage in social issues and put forward their solution. ~~Good~~ Oratory skills along with reading will transform children valiant enough to put forward their opinion, enlarge their perspective and speak for the rights poor and down-trodden masses. They will acquire ability to question superstitions and irrational beliefs in a scientific way. They will acquire scientific temper and thereby they can contribute their wisdom for social upliftment. They will develop various life skills in the classroom. ~~If~~ Such an education system will be a solution for the depletion of values from the society. They will ~~conserve~~ ~~or~~ ~~protect~~ their parents, conserve the environment, cherish our rich culture and heritage.

On this context, The initiatives taken by government in strengthening public education system is highly appreciable. Education should not be confined to the syllabus or textbooks, it has deeper prospects.

Our education system has many challenges

But through ~~our~~ the creative approach and divergent thinking of teachers and students we can ~~in~~ create our education system as the best one. But we must ~~have~~ <sup>want</sup> the ~~courage~~ <sup>courage</sup> to break the stereotypical way of teaching. "If you want to plan for an year, sow a seed. If you want to plan for a decade, plant a tree. If you want to plan for a century, ~~educator~~ provide education."

Education is a plan for a century. Thus quality education is inevitable for development.

Acquiring civic ~~conscious~~ <sup>consciousness</sup> enables through education enables us to work for the society. Such an education instill social commitment in the mind of children

This kind of education, provides great human resource for our country. ~~Then the such children and youth are infer such~~ Socially educated children play an inevitable role in transforming <sup>the</sup> world.

The words of Malala Yusuf Zai has great significance "One Pen, One Book and one teacher can change the whole world."
